## Synchronized Scanning System

*This automatic screening system is designed to work with a portable digital X-Ray system, or any other measurement equipment. The design allows quick imaging of walls, pallets, air freight containers and large objects for customs or security purposes.*

*The system is compatible with various X-Ray models. The system comprises of 4 synchronized horizontal and vertical conveyers. The vertical conveyer reaches 3 meters high and the horizontal conveyers cover a 2 meter wide area. The system automatically moves the X-Ray equipment in a synchronized motion, in a step by step action in manual or auto mode.*

# SecureDetect

## FEATURES & BENEFITS

- Scan large objects in an exact overlapping stitching motion
- 2 by 3 meter area can easily be inspected at a time
- Skip undesired areas –such as windows for saving time
- Touch screen displays the scanned areas
- Easy operation and setup
- Complete system is packed in two hardwood cases
- Heavy duty connectors and carrying cases
- Compatible with most X Ray systems
- Fit for mobile or stationary use

## APPLICATION

Inspection of pallets, air freight containers, walls and large objects.  
 Customs, bomb squads, VIP units and construction inspection.

## SPECIFICATIONS

- 2 vertical conveyors
- 2 horizontal conveyors
- Control unit based on a touch panel with a matrix division coverage display
- Control boxes for every individual system
- 40 meter System cable.
- Heavy duty carrying cases
